

Giant Sports timer

Designed by Unipar Services for sporting and promotional events, the Giant Sports timer is extremely flexible and can be configured to a variety of customer requirements as a TIMER counting UP or Down in either Whole or tenths of a second and can be incorporated into a number of interactive applications fitness, agility, etc. When the big button is struck this starts the Timer on the LED display on Ultra Bright 260mm high numbers. This continues to run until the button is hit once more and the timer freezes displaying the elapsed time.

It is a fun way to add a competitive edge to training sessions and is being used by some rugby clubs as part of their training schedule. The option of multiple buttons is available should the display be used as part of an assault course.

Housed in a slim impact resistant display with 270mm ultra bright numerals, the display can be easily seen on even the brightest day. The housing is also waterproof should the weather deteriorate. Supplied with its own carry case and stand, the system also comes with a 12v power pack and charger.

Specifications
