

Interactive 2 Digit Display

Designed by Unipar as a highly visible compact display which will work in tandem with our Genesis radar and SL700 laser speed meters, the 2 digit display offers excellent roadside presence and will add impact to any Speed Watch group or driver awareness initiative.

The display comes as a complete kit including compact tripod, power pack & charger packaged together in a robust carry case. It can be plugged into any Genesis radar or SL700 laser to provide instant real time speed displays to drivers and passers by. The display comes with operator set speed threshold and auto dim sensors to avoid unnecessary dazzle in low light conditions.

The kit can be assembled in just minutes and is easily transported from location to location quickly and without fuss. The power pack will provide a whole days operation and will quickly recharge within 3-4 hours.

The 2 digit display can be used with any existing Genesis or SL700 without any need for alteration.

Specification
